

Resin: High-performance, scalable, open source application server

Delivering the most lightweight and scalable software is just the beginning. By employing agile development with rigorous planning and testing, Caucho continuously aligns our product delivery to meet our customers' needs. Our focus is on the advancement of the Resin Java EE 6 Web Profile and beyond to provide developers with a highly functional yet lightweight tool: an application server with built-in Caching, Cloud Computing Support, Messaging and Clustering. Resin is a fast and clear-cut Web Profile application server designed for deployment and management of both web-tier and service oriented applications. From WebSocket to SOA, Resin provides current and next generation enterprise features.

The Resin Application server provides Servlet, JSP, JSF, JSTL, EJB 3 Lite, transaction management, messaging, remote services, distributed sessions, SSL, a complete logging solution, PHP, a fast and fully capable HTTP server, and load balancing. Build your business with a solid application server, supported by Caucho engineers, for seamless business and technology infrastructure growth.
